

EHSAN SHAHID

Software Engineer | MERN Stack & Machine Learning Developer

Lahore, Pakistan | ehsanshahid522@gmail.com | +92 345 7124397

[Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Software Engineering graduate (University of Central Punjab) specializing in Full Stack MERN development, React Native, and Machine Learning / Computer Vision. Built and shipped AI-powered products, real-time mobile apps, and freelance web applications for international clients on Upwork — owning each project end-to-end from database design and model integration through deployment. Seeking an entry-level Software Engineer / MERN Stack Developer role where I can apply full-stack and AI engineering skills to production systems.

CORE TECHNOLOGIES

React.js • React Native • Node.js • Express.js • MongoDB • REST APIs • Python • PyTorch • Computer Vision • Machine Learning

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, Kotlin, SQL

Frontend: React.js, React Native (Expo), Tailwind CSS, Bootstrap, HTML5, CSS3

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Socket.io

Machine Learning: PyTorch, Computer Vision, EfficientNet, ResNet, Flask, NumPy, Pandas, Scikit-learn

Databases: MongoDB, MySQL, Firebase

Tools & Platforms: Git/GitHub, Vercel, Postman, VS Code, Android Studio

EXPERIENCE

Freelance MERN Stack Developer | Upwork

2024 — Present

- Developed and deployed full-stack MERN applications for international clients, taking each project from requirements to production.
- Designed scalable REST APIs and optimized MongoDB schemas to support growing application data needs.
- Managed client communication, timelines, and revisions independently, maintaining strong client satisfaction and repeat engagement.

PROJECTS

Skinzy — AI-Powered Skincare & Telemedicine Platform — React Native, Node.js, Express.js, MongoDB, Python, PyTorch, Flask, Socket.io, Firebase

- Built a healthcare platform using Machine Learning and Computer Vision (PyTorch, EfficientNet/ResNet) to analyze skin conditions from images and generate personalized recommendations, served via a Flask API.
- Integrated Socket.io for real-time telemedicine consultations and Firebase alongside MongoDB for auth and data sync.

RoadRescue AI — React Native, Expo, Node.js

- Built a cross-platform roadside-assistance app connecting stranded drivers with nearby mechanics in real time, with role-based navigation for Driver and Mechanic users.
- Deployed the backend on Vercel for continuous availability.

Snapstrom — Full Stack Social Media Platform — React.js, Node.js, Express.js, MongoDB, JWT, Multer

- Developed a full-stack MERN social media app with JWT authentication, media uploads (Multer), and real-time interactions on a responsive UI.

Smart Parking System — Java, Java Swing, JDBC, MySQL

- Built a Java Swing desktop application with JDBC-based MySQL integration to manage parking slot allocation, billing, and administration.

EDUCATION

BS Software Engineering | University of Central Punjab (UCP)

Relevant coursework: Object-Oriented Programming, Formal Methods in Software Engineering, Database Management Systems, Web Development, Data Structures & Algorithms
